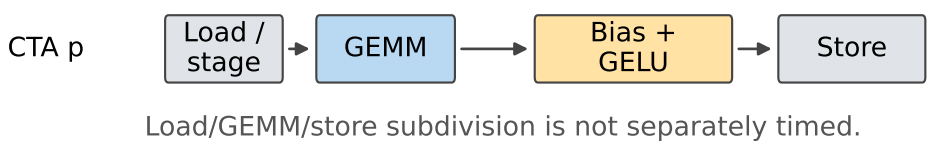
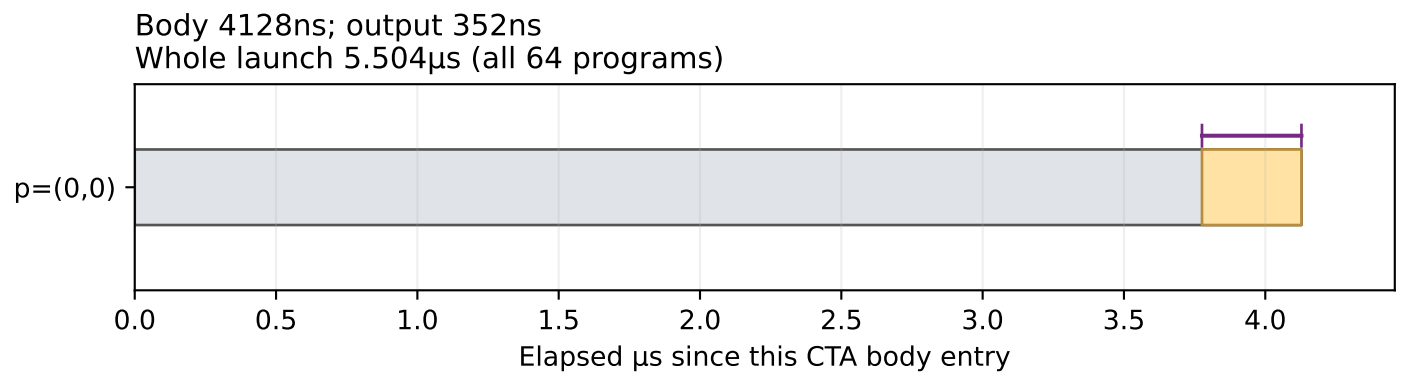
Fused GEMM + bias + GELU: compiled paths and measured time
One selected program p = (0,0), tile16², 128³; sample index7 in separate backend captures

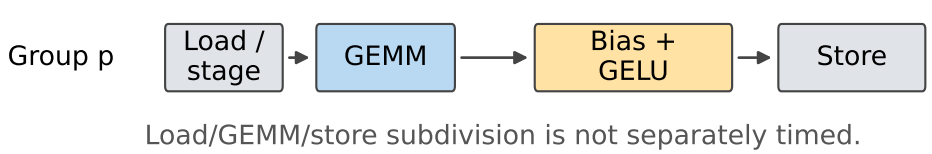
(a) NVIDIA V100S — compiled path



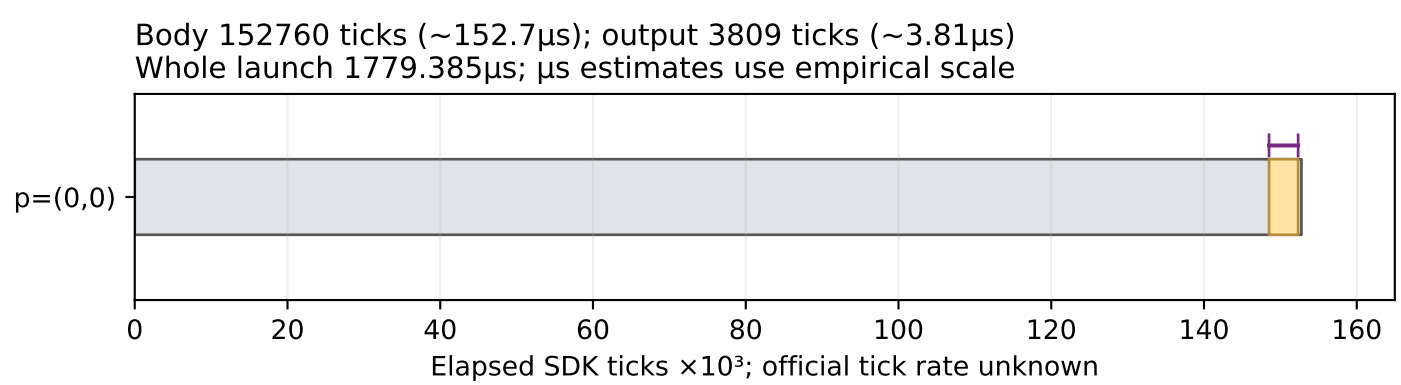
Load/GEMM/store subdivision is not separately timed.



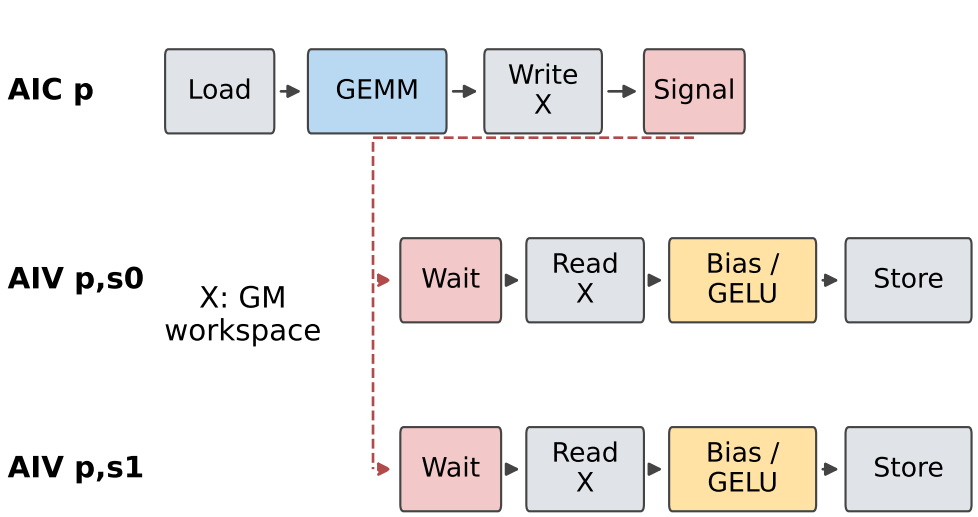
(b) Enflame GCU300 — compiled path



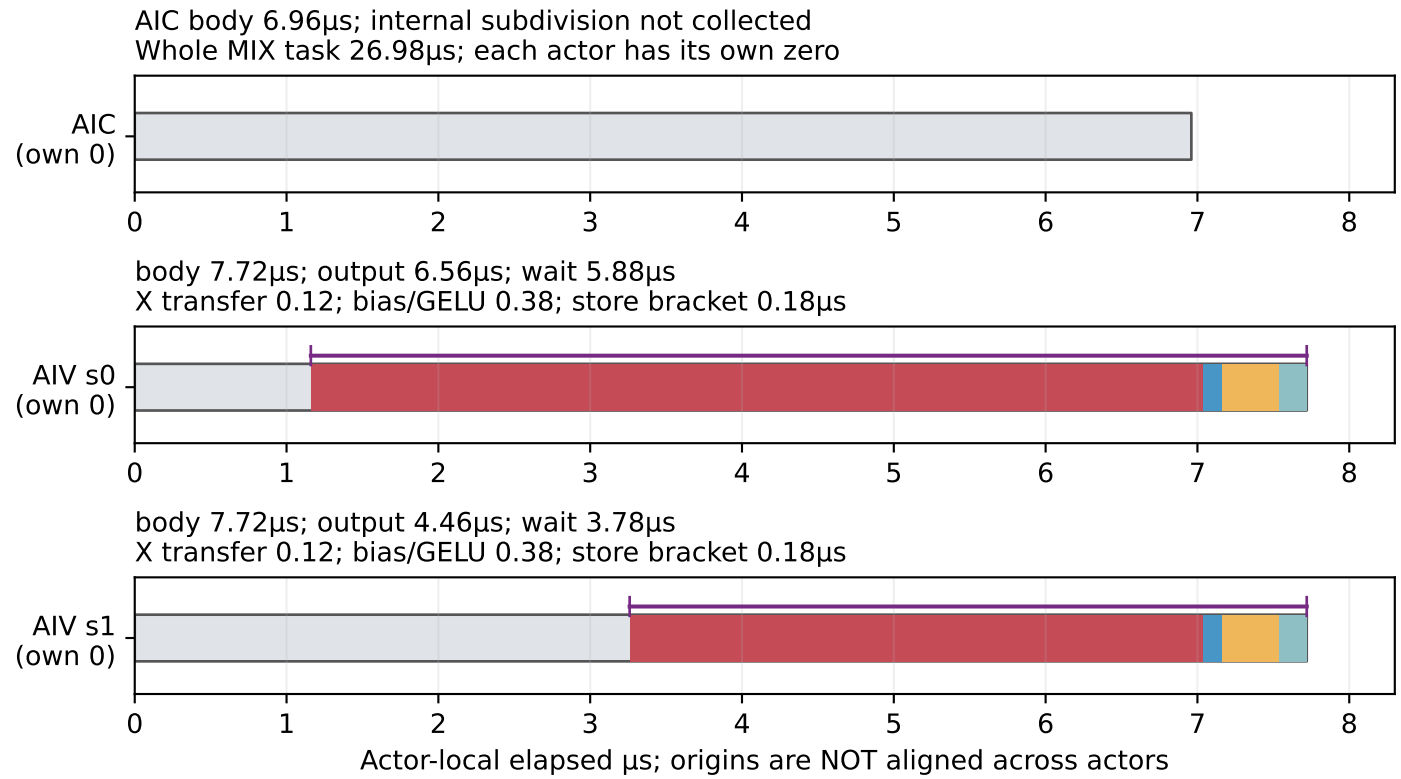
Load/GEMM/store subdivision is not separately timed.

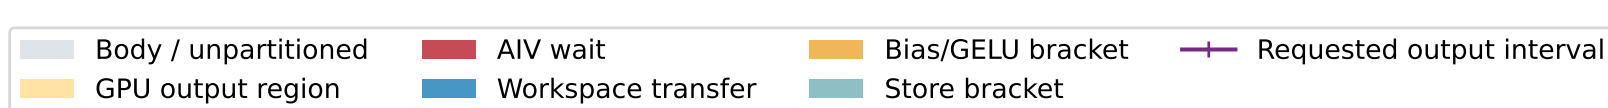


(c) Ascend 910B4-1 — compiled actor paths



Dependencies only; lane positions are not execution times.





Actual instrumented intervals, including added fences/probes. No cross-actor overlap inferred; GCU µs is an empirical estimate.
